

About

Luna is an e-wallet mobile application designed to provide a seamless and efficient financial experience, offering features such as budget tracking and an expenses tracker.

Tailored for the modern Filipino, Luna also supports localized services like cash-out partnerships with rural stores, ensuring accessibility and convenience for all users.

Problem

Many users struggle to monitor where their money goes, leading to poor financial management.

Most e-wallets focus on transactions but do not assist in setting or adhering to a budget.

Some apps overwhelm users with too many features or complicated designs, making it hard for non-tech-savvy users to navigate.

Users often don't realize when they overspend until it's too late

Solution

Luna offers a built-in expenses tracker that categorizes transactions (e.g, food, utilities, subscriptions)

Luna includes a budget tracking feature that allows users to set monthly limits for different expense categories and sends alerts if they are nearing their budget.

Luna partners with local sari-sari stores and rural establishments for cash-out services, ensuring broader accessibility.

Luna adopts a simple and intuitive interface with easy navigation, focusing on core features like tracking finances and managing expenses.

Emphasize

Qualitative Research

Focuses on understanding users' behaviors, preferences, and experiences by utilizing methods such as interviews, observations, and usability testing. Its goal is to uncover the reasons behind user actions, providing valuable insights to create user-friendly and effective products.

Interview Questions

- How do you currently manage and track your daily expenses?
- What challenges have you faced when using digital wallets for transactions?
- How often do you use e-wallets for transactions, and in what situations do you find them most useful?
- Do you encounter any difficulties accessing e-wallet services in rural or remote areas?
- What motivates you to continue using an e-wallet, and what might cause you to stop?

Competitor Chart

User Persona

Name: Angeline Bernales

Age: 15

Occupation: Student

Location: Cavite, Philippines

Income: Allowance

Banking Behavior

- Regularly check balance after receiving allowance.
- Use e-wallet for small daily transactions like food, transportation, or school supplies.
- Occasionally save small amounts when there's extra allowance.
- Rarely engage in advanced features like investing or bill payments.

Goals

- Efficiently manage my limited allowance without overspending.
- Track expenses to ensure I don't run out of money before the next allowance.
- Use the e-wallet to make cashless payments conveniently.

Motivations

- The convenience of cashless transactions in stores, public transport, and online shopping.
- Ability to budget and save using built-in tools like savings jars or transaction histories.
- Feeling in control of my finances despite limited resources.

Usage

- Receive allowance as a direct transfer from parents or guardians.
- Spend on daily necessities like food, transportation, and school materials.
- Occasionally send or receive small amounts of money from friends for shared expenses.

User Journey Map

Task	Get my weekly/monthly allowance from my parents.	Plan how to stretch my allowance until the next transfer	Use the e-wallet for transportation, food, or school supplies	Set aside some of my allowance for personal goals or emergencies.
Action	I wait for my parents to transfer money and immediately check my e-wallet balance after receiving a notification.	Manually track spending in my notes app since the e-wallet doesn't have detailed budgeting tools.	Pay through QR codes at convenience stores or send money to friends for group purchases.	I manually transfer money to a separate savings account or just try to avoid spending my full balance.
Feeling	Relieved and excited to finally have funds.	Confident when I stick to my budget, Stressed if I overspend early in the week.	Frustrated when merchants don't accept the e-wallet or there are hidden fees	Proud when I successfully save.
Improvement	Add a feature where parents can schedule or automate transfers.	Add a budgeting feature that helps students set daily or weekly spending caps with reminders.	Expand partner merchants and offer student-exclusive promos or cashbacks.	Introduce a feature that lets me create visual savings goals or auto-deduct small amounts into a savings jar

Empathy Map

Says

- "I hope my allowance is enough until next week."
- "I need to track my spending better."
- "Why are the transaction fees so high?"
- "This app should be easier to use."

Thinks

- "How can I save a bit of my allowance for emergencies?"
- "I need to manage my budget so I don't run out of money."
- "What if I lose access to my account?"
- "Should I switch to a different e-wallet with lower fees?"

Does

- Checks e-wallet balance to ensure they're within budget.
- Uses the e-wallet for everyday transactions for food and stuffs.
- Saves small amounts in the app's savings feature (if available).

Feels

- Worried: About running out of allowance before the next deposit.
- Relieved: When the app simplifies payments and shows clear transaction histories.
- Excited: When discovering discounts, cashback, or promos for students.
